FCR/Coral Calcium Resurfacing

The "FCR" Treatment was made popular in Korea. It is a unique and different approach to harsh peeling and laser procedures. FCR is extremely effective at lightening hyperpigmentation due to sun damage and melasma, reversing acne scarring by resurfacing the texture of the skin and improving pore size dramatically.

FCR also activates the cell regeneration cycle and stimulates the production of collagen.

Brow Lamination

Eye Brow Lamination is a procedure that focuses on creating shiny, smooth brows. Also sometimes called an "eyebrow perm," the high-shine effects tend to be sought after by those who may be Experiencing thinning or unruly brows. Unlike micro-blading or True Tattooing, needles and coloring are not involved. This also does NOT restore eyebrow growth.

As a semi-permanent procedure, eyebrow Lamination may also be a good fit if you want to keep your brows styled a certain way but are tired of using eyebrow gel every day. You will need to repeat the process every 6 months and a skin sensitivity risk is involved.
